

NdFeB black rubber coated magnet with threaded stem

Product description

These rubberized NdFeB pot magnets has a threaded stem and can be fastened together with a nut. The rubber coat reduces friction so that the surface can be well protected from scratches.

The rubber material we use is Santoprene. The features of Santoprene are: even thickness on the holding face to have better holding force, smooth surface that gives better appearance and, more importantly, it is more durable.

Item No.	D	H	L	M	Force			Weight
